

Feature: Patient Record Search

As a healthcare professional, I need to be able to search for patient records using their unique patient ID.

Scenario: Find an existing patient

Given I am on the patient search page

When I enter a valid patient ID

And I click the 'Search' button

Then the patient's record should be displayed.

Scenario: Patient not found

Given I am on the patient search page

When I enter an invalid or non-existent patient ID

And I click the 'Search' button

Then a 'Patient Not Found' error message should be displayed.
